In the design of the Boeing 777 passenger-plane, the emphasis was on aerodynamics to reduce fuel consumption and costs, and comfort for the airline passengers. Extending the wingspan and fuselage, and improving the cabin and cockpit design, are other important objectives. Noise level does not play a role in passenger comfort, although it is a factor in the design of the engines. In the 1960s the Boeing 767 and its 767 derivative, the Boeing 767-400ER, both with longer wings, and the 767-200ER (with a shorter more economical wing) are the first aircraft with better than average noise levels. Concorde was not a bomber, but a passenger plane. Its route was restricted to cities such as New York, Washington, Paris, London and Frankfurt. It was therefore designed for the passenger, and it was noisy. Its drivers had to learn the desired speed before takeoff and first crossing of the Alps, and on the warm-up after takeoff. The 757 noise levels are superior to those of Concorde, although the noise was not the main problem. Airline policy of keeping aircraft noise levels low was not kept. The 777 (possibly the aircraft for long-distance general aviation and for freight) is designed to be quieter than Concorde.

I'm reading the title and going to down. A: I am afraid I cannot provide any more details from those questions because you need to put any data in a question. The only thing I can do is to point you to a nice PyDoc where your question can be made more clear: Datetime Datetime.date Datetime.datetime Maybe you then can find a solution on your own from these examples. The mentioned string formats work both in Python 3 and Python 2. In your case pd.to_datetime('2020-01-01') yields 2020-01-01 00:00:00 Concerning the date alone pd.to_datetime('2020-01-01') yields datetime.datetime(2020, 1, 1, 0, 0) See also Python datetime docs What happens when Python tries to parse a date without a time? A: You have strings, that you can easily convert to datetime and then format using these methods Assuming string is 2020-01-01: Use os.path.split(string): >>> date = '2020-01-01' >>> os.path.split(date)[-1] '01' Use: import datetime import time import calendar date = '2020-01-01' timedelta = datetime.timedelta(days = 0) date += timedelta.days + " + timedelta.seconds time.strptime(date, '%Y-%m-%d %H:%M:%S') Output: 2020-01-01 00:00:00 Use: datetime.datetime.strptime(date, "%Y-%m-%d %H:%M:%S") Output: 2020-01-01 00:00:00 Use: datetime.datetime.strptime(date, "%Y-%m-%d").strptime('%Y-%m-%d') Output: '2020-01-01' Arnold Schwartzman is a known quantity in the men's tennis world.
