Editing the canvas Photoshop's default setup displays four areas on the main screen: the name of the document, the name of the current layer, the Window button, and the tool buttons (see Figure 5-5). The main screen will always contain at least two sections: an image preview area at the bottom and an area above containing the currently open layer. FIGURE 5-5: The default Photoshop window looks like this. To work with the image, you must select an image and activate the Layer menu from the main window's drop-down menu and click the New Layer icon. This opens a new, empty layer on the canvas, as shown in Figure 5-6. (Remember that the empty layer does not have any visible image information until you layer the image on it.) You can work on the empty layer until you want to add more layers to your image. (The New Layer icon appears in the lower-left corner of the main window.) FIGURE 5-6: The New Layer icon opens a new, empty layer on the canvas. You can add text, shape, or gradient fills to an open layer, or you can use layer masks to hide parts of a layer that you don't want to see. (We talk more about layers and masks later in this chapter.)

What's New In Photoshop 2021 (Version 22.1.0)?

. For the 16-year-old pregnant woman, a family's financial situation has a greater influence on the likelihood of the father's use of contraception than factors associated with the woman. Discussion and Conclusions {#s4} ===== In this study, we investigated the prevalence of unwanted pregnancies among 16-year-old girls in China. We found that the prevalence of pregnancy, the number of pregnancies, and the proportion of pregnancies with unwantedness are high among this age group. Our result shows that in rural areas, the rates of pregnancy and unwanted pregnancy were higher among rural girls than those among urban girls, in agreement with the studies of Sharieffi and colleagues.[@R15] Newbold and colleagues[@R16] and Oulof *et al*.[@R17] Our study suggests that even if less than 10% of the girls in urban areas became pregnant, 30% of those in rural areas did. This means that pregnancy prevention measures should cover more than one-third of the rural population. In contrast, the rates of pregnancy and unwanted pregnancy were lower in urban areas, and the pregnant rate was as low as in rural areas, even when the rate of unwanted pregnancy was as high as in rural areas. This might be explained by the role of the media in lowering the rate of unplanned pregnancies in the younger urban generation.[@R18] Compared with rural areas, the larger proportion of youth workers in urban areas allows for more opportunities to encourage youth to accept pregnancy prevention measures. Moreover, more teenagers from poorer families in urban areas tended to be employed by the government or in small businesses, increasing their access to family planning services. Our study reveals that the rate of unwanted pregnancy is much higher than the rate of unwantedness. This result can be attributed to the fact that most girls married before they got pregnant, and the number of husbands was another major predictor of unwantedness. Although most girls did not want to get married, their parents wanted them to get married, in accordance with the finding of previous studies on unwantedness among adolescents.[@R16] Our result suggests the need for more effective family planning services and policies to prevent unwanted pregnancies among younger adolescents. This study revealed that the number of pregnancies and the rate of unwanted pregnancies were higher among rural girls than those among urban girls. This result may be explained by the fact that the long distance of the women to their hometown made it more difficult for the youth to use contraceptives and receive family planning
