Choosing a canvas style When you open a document, Photoshop Elements asks you to select a style. This choice determines whether your image appears flat or has 3-D look. Typically, using the regular style works well for most images. The only issue with the regular style is that you can't easily change the look or color of the selection handles that indicate the individual elements on the canvas. If you prefer to work with your image as an object on a flat background, you may want to use the regular style. You can change the look of the selection handles by changing the canvas style. You may also want to create a special canvas style for special photos where it's important that the image appears flat. For example, in a portrait, putting a white background in an image can make the face look stark. In that case, you may want to put the background on a transparent, black-colored canvas. In any case, you must keep the canvas background as your primary object on the layer. So, if you want the background to be a dark gray, make that as the default color.

The Elements update, of which Photoshop is one of the seven updates, was released on August 8, 2019. A free upgrade to the software is available for all existing users. With the update, Adobe promises to introduce the ability to create 3D images and an integrated style tool. Below, we will discuss each of the main Photoshop Elements features and show you how to use them. Compatibility Photoshop Elements is compatible with Windows 7, Windows 8, Windows 10 and macOS 10.9 through macOS 13.9. When using macOS, you should make sure to have the updated version of the Mac operating system available. Features This section will cover each of the main features of Photoshop Elements. Basic Basic is the starting place for Photoshop Elements users and includes a few basic tools and filters. Exposure The exposure tool allows you to increase or decrease the amount of light in an image. An exposure slider can be found on the bottom of the image window. Changing the exposure of an image changes the brightness of the entire image. Select Photoshop Elements has a few select tools. The first is the selection tool. You can select different areas in the image using a box that you can drag. To select, simply drag the box. The edges of the box turn a different color and the tool is locked. When you release the mouse button, the box moves and you can either select all of the enclosed area or just part of it. Zoom Zoom is the tool you use to zoom into, out and around the image. While holding down the control key, you can zoom in the image by double tapping on the image. To zoom out, you can tap and hold down the control key and drag the lens out. The image zooms out as you move the mouse. To zoom in, tap the mouse and drag the zoom in bar closer to the image. Straighten The straighten tool is used to make sure your images are straight. The tool is located in the top toolbar and looks like a pair of prisms. Drag the straighten tool in any direction to rotate the image. When you let go of the mouse, the image will be straight. Crop The crop tool is used to reduce the size of the image to a specific size. To crop, drag the 05a79cecff

Land use change in northern China to contribute to soil moisture and surface air temperature variability. Land use change (LUC) in northern China for the past decades has been the primary source of emission of greenhouse gases (GHGs) and energy consumption. Soil moisture (SM), an important component of atmospheric moisture and energy balance in arid and semi-arid regions, is sensitive to land use change (LUC), and thus, LUC will strongly affect SM variation in northern China. Here, we developed two models to simulate SM and air temperature (AT) variability based on meteorological and land use data from March to October of 2011 for the LUC of northern China over the past three decades. Model results showed that the soil moisture reduction areas mainly concentrated in the Inner Mongolia Plateau, the Nanjiang River basin, and the Mongolian Plateau. The estimated average SM change was -0.21% yr $^{-1}$, which was -0.29% yr $^{-1}$ in the dry season and -0.12% yr $^{-1}$ in the wet season. The LUC-induced SM change in the dry season ranged from 0.03% yr $^{-1}$ for the southwestern areas to 0.19% yr $^{-1}$ for the far eastern areas. During the dry season, the Mgh2O change ranged from -0.12% yr $^{-1}$ in the southwest to 0.12% yr $^{-1}$ in the far east. SM changes along the transport path were opposite to AT changes. During the wet season, the LUC-induced SM change ranges were similar to the estimated average SM change (i.e., -0.11% yr $^{-1}$). The estimated SM changes in the southwest are correlated with increased variations in thermal radiation. The estimated LUC-induced SM change in the dry season was affected by precipitation and soil moisture in the northwest area. This study has shown that LUC in northern China could lead to changes in SM and AT variability in arid and semi-arid regions. Lymphoepithelioma-like squamous cell carcinoma of the liver. A rare variety of hepatocellular carcinoma (HCC) composed of large epithelioid cells with a prominent lymphoid background is described. The tumor cells were negative for keratin AE1/AE3, CAM5.2, BerEP4, vimentin, B-cell markers, carcinoembryonic antigen (CEA), and alpha-fetoprotein (AFP).

Hempstead Correctional Facility Hempstead Correctional Facility is a maximum-security state prison for men located in Hempstead, on the grounds of the Buffalo Federal Detention Facility and Metropolitan Detention Center in Buffalo, New York. The facility is operated by the New York State Department of Corrections and Community Supervision, and was opened in 2002. A renovation project began in 2005. The facility has housed numerous high-profile inmates, including former New York gubernatorial candidates Carl McCall, Larry Sharpe, and Bernard Spitzer. New York City mobster Bonanno crime family boss Joseph Massino and former Gambino crime family boss John Gotti, Jr., were both held at the facility, although Gotti was moved to the Men's Facility at Great Meadow Correctional Facility in March 2013. In April 2018, New York Gov. Andrew Cuomo announced that the state was in talks to purchase facilities in upstate New York that will double the number of state inmates held in the prison-industrial complex. Notable incidents In July 2003, guards in the Food Service Department found inmate Larry Sharpe wearing a special Christmas sweater, which had been decorated with a swastika. The jail guards confiscated the sweater and locked Sharpe in segregation for a week. On September 6, 2006, inmate Bernard Spitzer was convicted on two separate felonies related to unlawful use of a private cell phone while the vehicle in which he was a passenger was being pursued by police. Spitzer was sentenced to one to four years in state prison on one count of reckless endangerment and was given one to three years in prison on the other charge of unlawful surveillance. At a sentencing hearing in the jail, Spitzer's defense argued that, because the pursuit began as a minor traffic infraction, the pursuit was not related to law enforcement. The presiding judge disagreed, stating that the arrest for a minor offense "was the catalyst for the whole thing." On June 4, 2007, inmate Mark Turner was stabbed 14 times during a riot that resulted in 4 deaths. On July 24, 2010, inmate Michael "Ronnie" McClain died at the age of 49. McClain was serving a life sentence for second degree murder. In the days leading up to his death, McClain had threatened to attack the superintendent of the prison and was then transferred to the Behavioral Health Unit in a mental health evaluation. McClain was found dead in his cell of an apparent suicide by hanging. McClain was said to be the subject of an
