If you or someone you know has a ticket number, you can try to fix it in a. time of day that I was at the gym Saturdays were my days off so I would go to the gym then. Two of my most memorable fitness experiences are the 10th birthday party I went to with my (then) friend, and the time I snuck into the gym at 1:30 AM to see the movie Pulp Fiction and jerk off (okay, I'm willing to admit that it was probably the first time I ever did that but in retrospect it's kind of impressive. It was the era before YouTube and Facebook so not really all that much was out there to see. I guess I was the first to see a short clip of Kurt Russell giving it to Samuel L. Jackson). Since that time I've been to a ton of fitness events ranging from corporate events at Microsoft to the O'Reilly conference and tons of different occasions of all sizes and shapes (including babies and dogs in the family). So if you are the host of a fitness event I hope you enjoy the list of my favorite fitness moments. 1. The Day I Became the "Influencer" with Kelly Siemaszka at Yoga Journal. It was such a great event and all in the perfect place. It was held at the Polhemus Health Club in the Delmar Hall, a space that is home to an occasional Yoga Journal event. I was honored to be invited into this really intimate setting. Kelly and I went around the world with the lights and shadow pieces. I'm really happy with how it turned out. Kelly and I are thinking of doing more of these in the future. I really can't wait to try to do more projects with Kelly. Our on camera lighting and shooting techniques. 2. Standing

.....Watch movie L'Artis (2002) - Full movie online.download the last sverigefullmovie.comQ: How do I install Python 2.7 and then install a python plugin I want to install a python module called python-snappy which requires at least python 2.7.1 I am running on 64 bit Ubuntu 12.04, using python2.7 that comes installed by default. I want to be able to run the python-snappy package for python 2.7.1 but when I try to import the package I get the error ImportError: No module named snappy How do I install python 2.7 and then the python plugin so that I can do the install? A: You can install the dev version: sudo apt-get install python-snappy and from there install the latest: sudo apt-get install python-snappy If the later fails (it did for me), you can try to explicitly tell the package installer where to look for the compiled binary with the --prefix option: sudo apt-get install --prefix=/usr python-snappy This will not change your system python, it will just install it in /usr/lib/python2.7/dist-packages. For details see here. A: Edit the list of installed software by executing this command: sudo apt-get install python-minimal python-setuptools (Unfortunately you need to modify this line because the python2.7 package is not available in the default repositories, so I've added "python2.7" to the end of the line. Change the package name "python-minimal" to "python2.7-minimal" for your system.) In this list the package python-snappy is available only in the repository ppa:maru-ga/ppa. There's no official Ubuntu package yet. You can use this PPA to install it. (I think this is the only package you need.) Install the missing python-snappy package: sudo add-apt-repository ppa:maru-ga/ppa sudo apt-get update sudo apt-get install python-snappy In some distributions the package python-snappy is called python-snappy-dev
